

Dream Job

Software Developer

What do they do?

Software developers are the ones who makes computer programs. Some develop the applications that allow people to do specific tasks on a computer or another device. Others develop the underlying systems that run the devices or that control networks.

Where can they work?

Usually, software development is a collaborative process, and developers work with others who also contribute to designing, developing, and programming successful software. However, some developers work at home.

What education do you need?

Software developers usually have a bachelor's degree, typically in computer science, software engineering, or a related field.

How is the job outlook?

Employment of software developers is projected to grow 22 percent from 2019 to 2029, the need for new applications on smartphones and tablets will help increase the demand for software developers. Software developers are likely to see new opportunities because of an increase in the number of products that use software. For example, more computer systems are being built into consumer electronics and other products, such as cell phones and appliances.

How much does it pay?

The lowest you can get paid is less than \$64,240, The median annual wage for software developers was \$107,510 in May 2019 but can go more than \$164,590. The median wage is the wage at which half the workers in an occupation earned more than that amount and half earned less.

Job Description

About You:

- You are excited by scaling and asynchronous processing, including messaging tech/buses, and why Kafka isn't the answer to everything.
- You know (and can explain) networking, and how to tell when it's not working as expected.
- You understand and like working on the challenges of expanding beyond one machine, and how things change when you move from hundreds to thousands to millions of things/transactions/hits.
- You know what "big data" means and (just as importantly) doesn't mean.
- You know what Artifactory and Docker bring to the development process.
- You know why your code needs testing, and how to do that repeatably.
- You know why automated builds and deployments matter and know what that's called.
- You know why "it runs fine on my laptop" generates eyerolls.
- You've built scalable products that would be characterized as one or more of: distributed services, e-commerce, and fault tolerance.
- You understand SQL beyond "SELECT * FROM TABLE".
